

WORKSHOP DESCRIPTION

From The Toolbox To Frontline Management Of A Regulated Bus Fleet

Course Description

This two day program not only sets the stage for those smart technicians who desire to move upward into a fleet management position, it's also for those who:

- Want to continue working with their tools but gain insight into the fleet management process and responsibilities.
- Have already been placed into a fleet management position without the basic management training to become successful.
- Those who want a "global level of training" that goes beyond in-house programs.

Overview:

We begin with the basic responsibility of the new manager, move through the accepted fleet cost centers, which include oversight of parts, fuel, labor, and staffing. We also include a review of modern fleet management best practices, budgets, and P.M. theories and regulations as we blend these elements of the training into the concept of "analytical fleet management".

This class is part of the expanded level of training provided by Halsey King and Associates at Rutgers, Penn State, and Willamette Universities.

Target Audience:

Transit/Paratransit Maintenance Professionals, Managers, Drivers and Maintenance Coordinators

Presenter:

Halsey King, Fleet Maintenance Consultant
Retired Board Member – Society of Automotive Engineers
